

Author Contributions

The statement below is the one printed in the manuscript (Declarations section, revision 3). It is reproduced here as a standalone document so that each venue receives an identical, verifiable text. The division of labor reflects the real structure of the project: a computational side and a legal side, designed jointly and signed off jointly.

Both authors conceived the project and designed the protocol jointly. Amine Harch El Korane led the computational side: corpus engineering, baseline and challenger implementations, the persona pipeline, the sealed-exam machinery, and the reproducibility infrastructure. Ghali El Alj led the legal side: jurisprudential framing, doctrinal reading of the opinion corpus, legal interpretation of the results, and manuscript development. Both authors analyzed the results, drafted and revised the manuscript, and approved the final version.

CRediT-style mapping

Contribution	A. Harch El Korane	G. El Alj
Conceptualization	Lead	Lead
Methodology (experimental design)	Lead	Lead
Software (corpus, baselines, personas, exam machinery)	Lead	Support
Legal / doctrinal analysis	Support	Lead
Case-law research and citation verification	Support	Lead
Formal analysis (statistics)	Lead	Joint
Investigation	Joint	Joint
Data curation	Lead	Lead (legal coding)
Writing — original draft	Lead	Lead
Writing — review and editing	Joint	Joint
Visualization	Lead	Support
Reproducibility infrastructure (hashes, freezes, CI audits)	Lead	Support

Lead / Joint / Support indicate the primary responsibility on each contribution dimension; both authors approved the final version.

This mapping is provided for editorial transparency. It does not change the equal standing of the two authors on the title page, and no third party holds authorship or ghost-authorship claims on any part of the manuscript, the code, or the corpus.
